

Business Sales Performance Analysis – Executive Summary

Project Overview

This project was conducted using Microsoft Excel and Power BI to analyze business sales data and identify trends, profitability drivers, and opportunities for business improvement. The analysis focused on sales performance across regions, product categories, and individual products while incorporating interactive visualizations for data-driven decision-making.

Key Performance Indicators

- **Total Sales:** \$2.30 Million
- **Total Profit:** \$286.40 Thousand
- **Profit Margin:** 12.03%

The business demonstrated strong overall performance with healthy revenue generation and consistent profitability across its operations.

Key Business Insights

Regional Performance

The **West region** emerged as the strongest contributor to overall sales, accounting for approximately 31.6% of total revenue. This indicates a strong customer base and significant market potential within the region.

Category Analysis

Among all categories, **Technology** generated the highest sales volume, outperforming Furniture and Office Supplies. The category continues to serve as a major driver of business growth and revenue generation.

Sales Trend Analysis

Monthly sales trends revealed a steady increase throughout the year, with noticeable peaks during the final months. This pattern suggests seasonal demand effects and highlights the importance of strategic inventory planning during high-demand periods.

Product Performance

A small group of products contributed a significant share of overall sales. The **Canon imageCLASS** product recorded the highest sales performance, demonstrating the impact of top-performing products on overall business results.

Sub-Category Analysis

Phones and **Chairs** emerged as the leading sub-categories in terms of sales contribution. Their consistent performance indicates strong customer demand and opportunities for focused marketing efforts.

Business Recommendations

1. Increase marketing and expansion efforts within the West region to capitalize on strong sales performance.
2. Strengthen investment in Technology products through targeted promotions and inventory optimization.
3. Prepare inventory and operational resources for peak-demand periods identified in the sales trend analysis.
4. Focus sales campaigns on high-performing products and sub-categories to maximize revenue growth.
5. Conduct additional analysis of lower-performing regions and segments to identify improvement opportunities.

Conclusion

The analysis highlights a business with strong revenue generation, healthy profitability, and clear growth opportunities. By leveraging insights from regional, category, and product-level performance, management can make informed decisions that support sustainable growth and improved business outcomes.
